

PLC Software Machine Automation Industrial Integration

PLC software development, machine automation, WinCC/SCADA systems and industrial communication for production lines and machines.

MACHINE

Sensors / Actuators

PLC

SIMATIC / TIA / SCL

SCADA

WinCC / Diagnostics

DATA

OPC UA / MQTT

MES

Production data

Steffen Krauth | SK DATA SYSTEMS

CAPABILITY 01

Develop machine logic and extend existing systems

Development, extension and optimization of PLC software for production systems and special-purpose machines.

PLC

PLC Software

- Siemens SIMATIC S7
- TIA Portal
- SCL / Structured Text
- Function blocks
- Modular program structures

SEQ

Machine Sequences

- Sequence controls
- State logic
- Operating modes
- Manual / automatic operation
- Permits and interlocks

DIA

Diagnostics

- Fault and warning messages
- Causes / corrective actions
- Service information
- WinCC / HMI integration

MACHINE AUTOMATION

Extend and optimize existing systems

RET

Existing Systems & Retrofit

Analysis, extension and stabilization of existing PLC and machine programs.

IBN

Commissioning & Troubleshooting

Support during commissioning, troubleshooting and optimization of existing systems.

CAPABILITY 02

Connect production systems with IT systems

Integration of machines, communication interfaces and production data into existing IT and MES environments.

OT

Machine Connectivity

- New and existing systems
- Retrofit
- Data point clarification
- Signal structures

COM

Communication

- OPC UA
- MQTT
- JSON
- Profinet
- Industrial Ethernet

HMI

SCADA / WinCC

- Visualization
- Alarm management
- Diagnostics
- Operator concepts

SYSTEM ARCHITECTURE

Clear industrial layers

Machine

Sensors · Actuators · Robotics · Conveying technology

PLC

SIMATIC · TIA Portal · SCL · Function blocks

SCADA / HMI

WinCC · Alarm management · Diagnostics

Communication

OPC UA · MQTT · JSON · Profinet

IT / MES

MES · Production data · Reporting

PROJECT FIELDS

Typical industrial topics

PLC software for production systems

Sequence controls, operating modes and diagnostic functions.

Machine connectivity to MES systems

OPC UA communication and interface logic.

WinCC and diagnostic systems

Alarm management, message structures and service functions.

Retrofit & existing systems

Analysis and integration of existing system structures.
